 of Chardonnay, Pinot Meunier and Pinot Noir  
 /characterized by aromas of ripe white peaches  
 and honey, ages 4 years in the cellars /  
 Contains sulphur dioxide.*

## Mikulov Subregion

*The Mikulov wine subregion extends over 4,737 hectare of vineyards, includes 30 municipalities, and covers 25.3 % of the vineyard area in the country.*

*It is the biggest and warmest wine subregion beneath the snow-white hillsides of Pálava. On its slopes, calcareous clays, sands, and massive loess drifts are plentiful, which gives mainly white wines their unmistakable flavour and aroma. In this area, white varieties especially thrive, such as Sauvignon, Riesling, Riesling, Miller Thurgau, Pinot Gris and Blanc, Grüner Veltliner, Chardonnay, and local varieties of Pálava, Aurelius, or Neronet. Of red wines, it is mostly St. Laurent, Pinot Noir, Blaufränkisch, and Cabernet Sauvignon which are grown here.*

## Velké Pavlovice Subregion

*The Velké Pavlovice wine subregion extends over 5,143 hectare of vineyards, includes 75 municipalities, and covers 27.5 % of the vineyard area in the Czech Republic. The subregion is located in the South Moravian Region and encompasses five districts – Brno-venkov, Vyškov, Breclav, Hodonin, and Brno-město.*

*The gentle slopes of the Hustopeče Hills ripple over the largest wine-growing village in the Czech Republic, Velké Bílovice, and slowly slope down toward Brno. The slopes in the northern region of calcareous clay, marl, and sandstone give the local white wines ample minerality, fruity tone with a distinctive fresh scent, and high-acid content. The most widespread varieties in this area are Grüner Veltliner, Traminer, and Neuburger. Thanks to the favourable climate with warm Phoenician winds and magnesium-rich soil, this land gives rise to excellent varieties of red wine, such as Blaufränkisch, Blauer Portugieser, or Zweigelt.*

## Moravian Wine Subregions

*Spa, relaxation, experience*
